PROFILE

Senior front-end developer: Vue 3, Livewire and TypeScript on Laravel apps, with good back-end experience in Laravel. At TakTek I build the front end of a Laravel application that runs 24 news sites; through IntimeDev I built front-ends for clients in Australia, the UK and Egypt. I also built a statistics platform rendered on the server, and my own installable app of over a hundred Arabic financial calculators. I'd rather settle the structure early and in writing, and I check every screen at 375 px before I call it done.

EXPERIENCE

TakTek (Istanbul, remote), senior front-end and UI developer — Oct 2024 to now

I own the front end of Devlo CMS, the Laravel platform behind 24 news and media sites, in a team. Freelance projects alongside, and my own products below.

IntimeDev, placed with SilverTrees (Australia), remote — Jul 2020 to Feb 2025

Front-end from XD and Figma for clients in Australia, the UK and Egypt.

Freelance — 2019 to now

Front-end and WordPress, mostly for Arabic businesses.

SELECTED WORK

Mo3ta Palestine information centre — mo3ta.ps

Design, front-end and back-end

Palestine's statistics in one place: dashboards, a map and charts over a large Arabic dataset, built so every number can be found and cited. Pages are rendered on the server with Inertia and arrive as real HTML, and Vue 3 adds the interactive layer on top. The map and the charts are one reusable component set, fed from the same indicator model.

Laravel · Inertia · Vue 3 · SSR · Charts

Devlo CMS Newsroom platform running 24 sites — Case study

TEAM WORK AT TAKTEK · Design, front-end and back-end; product owner of the front-end

One Laravel application running 24 news and media sites, most of them in Arabic, each with its own theme, modules, languages and editorial team. I designed the editorial panel and the theming model, then built both with the team. The panel works in Arabic, English and Turkish; switching a module off removes its route, its sidebar entry and its permission together. On the platform's English newsroom I ran the performance audit: fonts went from 749 KB to 78 KB and icons from 302 KB to 31.6 KB.

Laravel · Livewire · MySQL · Redis · Alpine

Musnad News and claim verification, Yemen — musnadye.com

Design, front-end and back-end

Arabic fact-checking for Yemen, here for the technical side: server rendering, crawlable pagination, an SEO audit and weekly PageSpeed runs.

Laravel · Livewire · Schema · SEO

Ahsebli My own product — ahsebli.com

Design, build and everything else

Over a hundred Arabic financial calculators. Installable, and a saved calculator keeps working with no connection.

PWA · Service worker · Schema · RTL

Toolora My own product, in development

NOT PUBLIC YET · Design, architecture, front-end and back-end

45 privacy-first online tools, each on its own indexable page and each running in the browser: no account, no analytics, no third-party request. Laravel 13 with Vue 3 islands and TypeScript, tests at three layers.

Laravel 13 · Vue 3 · TypeScript · Tailwind v4 · Pest

Matn My own CMS for hand-built sites — imsemoo.github.io/matn-site

Design, front-end and back-end

The client edits the real page inside the panel, so the design cannot be dragged apart. 1,500 tests gated in CI.

`CakePHP 5 · PHPUnit · PHPStan`

Yedi Başak Humanitarian aid charity, UK — yedibasak.uk

UI design, front-end and the Laravel back-end

Campaigns, quick donations, sponsorship and giving in several currencies, for a UK aid charity. I built the site, the Laravel back-end included.

`Laravel · Blade · Payments`

MORE WORK

Qasioun Center for Studies Syria, Türkiye — qasiounstudies.org

Design, front-end and back-end. Papers, library and media in Arabic and English, with a separate URL per language. Laravel and Livewire.

Cutaway Hospital digital twin, a concept — imsemoo.github.io/cutaway

Concept, 3D, interface and build. A 3D model of a hospital in React Three Fiber and TypeScript, replaying a simulated day or following it live from an event stream; the whole hospital draws at 72 fps or more on an integrated GPU. Simulated data, not a client product.

Nuqta Ledger My own Android app

Product design and the build, in Flutter. An offline gift ledger for Egyptian families, kept on the phone and nowhere else, with PDF reports. Flutter, Drift and Riverpod.

OzCar Australia — ozcar.com.au

Front-end, built from Adobe XD designs. A used-car marketplace: search, vehicle pages with finance calculators, live video presentations and an online auction dashboard.

BESA Egypt, UK — besaeg.com

Front-end from Figma, 30+ hand-built pages. University search, programmes, scholarships and applications.

Kevla Campa Caravan maker, a design concept — imsemoo.github.io/kevla-campa

Design and front-end, not launched. HTML, CSS and ES modules with no build step, and no axe-core violations across 24 page states. Placeholder copy, not a client launch.

FreightZone Freight marketplace, client and driver apps — Case study

DESIGN ONLY · Product design: UX, UI and the design system. A two-sided freight marketplace for Australia, 70+ screens and states in Figma on one design system.

SKILLS

Languages: PHP 8, JavaScript (ES6+), TypeScript, SQL, HTML5, CSS3

Back-end: Laravel with Livewire, Blade and Sanctum; CakePHP 5; REST APIs; MySQL, Redis, Docker

Front-end: Frontend development: Vue.js (Vue 3), Inertia, React (React.js), React Three Fiber, three.js, Livewire, Alpine.js, TypeScript, JavaScript, HTML5, CSS3, SCSS (Sass), Tailwind CSS, jQuery, Bootstrap, Vite, responsive design, PWAs and service workers

Mobile: Flutter with Drift and Riverpod

Quality: Pest, PHPUnit, PHPStan, axe-core and WCAG accessibility checks, PageSpeed and Core Web Vitals, structured data and SEO

Workflow: Git and GitHub, CI/CD with GitHub Actions, code review; AI-assisted development with Claude Code, every change reviewed and tested before it ships

CMS: WordPress and Elementor

Interface: Figma, UI/UX, design systems and tokens, Arabic RTL and bilingual interfaces: I can design the UI myself, without a separate designer

LANGUAGES

Arabic, native. English: C1 reading and writing, conversational speaking.

HOW I WORK

In writing: briefs, staged deliveries and reviews in text, with replies within a few hours. Every project above is on the portfolio with its live link or case study.
